Water play is often included in outdoor play during Terms 1 and 4 when the weather is warmer. Water safety is included in the preschool learning program including Laurie Lawrences ‘Kids Alive do the five’ program.

- Water play usually includes water in the water trays, the sink and tap attached to the water tank, and watering the garden which includes filling watering cans from a tap and or larger bucket of water.
- Constant supervision is maintained when children are playing with water
- Water features or blow up swimming pools are rarely used at preschool but would require constant supervision to be maintained.
- Pooled water after rain is drained off as soon as practically possible.
- Children do not have access to the two outside mains water taps as both require a tap key to be fitted. The tap key is kept in a high position out of child reach.
- Adults do not carry and consume hot drinks in the children’s play areas.
- Children have no access to hot water
- Children can access the taps in the bathrooms to wash their hands but are reminded that it is not a play area.
- Children are encouraged to tell us when they need to use the bathroom during outside play so we can monitor their whereabouts at all times.
- An excursion to any destination with a water feature would require a risk assessment to be completed as part of the planning process.
